Typed Judgment, Deterministic Enforcement: A Consent-Gated Gateway Architecture for Inter-Agent Collaboration over Messaging Channels

Special Session XII: Agent Interconnection and Collaboration Intelligence, JCRAI 2026

Author details

- Yizhang Cai, School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China, 2025111259@bupt.cn
- Jun Liu, School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China, liujun@bupt.edu.cn
- Di Ma, Beijing Guoshu Zhilian Technology Co., Ltd., Beijing, China, madi@guoshuzhilian.com.cn
- Ke Yu, School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China, yuke@bupt.edu.cn
- Ke Li, School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China, like1990@bupt.edu.cn

Author biographies

Name	Brief Bio
Yizhang Cai	Yizhang Cai is a graduate student at the School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China. His research interests are message-channel agent gateways, typed decision models for routing and consent, and the security evaluation of agent interconnection protocols. He is the first author of this paper.
Jun Liu	Jun Liu is with the School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China. His research focuses on agent interconnection and collaboration protocols; he is the first author of the ACPs protocol suite for the Internet of Agents and a co-author of the ACPS protocol study.
Di Ma	Di Ma is with Beijing Guoshu Zhilian Technology Co., Ltd., Beijing, China. He works on the engineering and deployment of AI systems and on the industrial requirements behind this study.
Ke Yu	Ke Yu is with the School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China. Her research covers network intelligence, traffic analysis, and agent collaboration protocols; she is a co-author of the ACPs protocol suite and of the ACPS protocol study.
Ke Li	Ke Li is with the School of Artificial Intelligence, Beijing University of Posts and Telecommunications, Beijing, China, and is the corresponding author of this paper. His research interests are agent collaboration protocols, multi-agent systems, and protocol-level trust and security for the Internet of Agents.
